

Sheffield Formulary

January 2024

INTRODUCTION

The Sheffield Formulary has been produced under the auspices of the Sheffield Area Prescribing Group (APG) and is designed to give clear concise guidance on drug selection. This will continue at Sheffield Place, within NHS SY ICB for the foreseeable future.

The formulary contains a list of preferred choices for non-specialist drugs and products, which will be available in both primary and secondary care. Please note that appropriate funding will be made available for all drugs that receive positive NICE technology appraisal, however not all of these drugs will be specifically listed in this non-specialist, primary care formulary.

The choice of preferred drugs has been made on the basis of evidence of clinical efficacy, safety, patient acceptability and cost effectiveness. The contents reflect wide consultation within the city.

Using the Formulary

Medicines are presented according to the [BNF legacy classification](#). In the majority of cases generic drug names are used. Brand names are given when brand prescribing is advocated for clinical reasons, or if prescribing by brand name is the most cost-effective way to prescribe a particular product.

Drugs, devices or products shown in bold type are those that are recommended for 'first line' use.

Formulations, strengths and pack sizes have been included where considered significant.

In Sheffield, in line with NHSE guidance we recommend self-care first line, however there are exceptions when prescribing may be in the best interest of the patient, see [South Yorkshire Self-Care Guidance](#) for more information. For this reason, the formulary does include preparations suitable for self-care, however self-care or OTC (over the counter) will be flagged as first line within the chapter / section where relevant.

The Formulary is subject to continuous review in order to respond to changes in clinical practice including national guidance, the marketing and licensing of new products and changes to licensed indications of drugs.

Further Information

Information and advice on the use of medicines is readily available from the medicines optimisation team. syicb-sheffield.medicinesoptimisation@nhs.net

Comments

The success of the Sheffield Formulary depends on the active support of all prescribers. The Area Prescribing Group welcomes feedback and constructive comment from users. If you have any suggestions or comments, please direct these in the first instance to the [APG mailbox](#) or:

Using the Formulary – Anatomy of Entries

If the chapter includes preparations where self-care is first line, this will be flagged by either; a message like this, a message within the chapter entry or by 'OTC' annotated within the product entry

South Yorkshire self-care guidance encourages the use of Over the Counter (OTC) products for minor illnesses, such as indigestion, infant colic, constipation, diarrhoea. Please see [South Yorkshire Self-Care Guidance](#) for full details and <https://www.nhs.uk/> for self-care information.
